

Sponsoring opportunities Battery Mining Dialogue

March 16 2022 | 11 am - 5 pm CET
6 pm - 12 am CST
5 am - 10 am EST

Hosted by

Battery Associates

In partnership with

KAMNICHAIN

Why this event?

Amidst ongoing technology development in the battery sector, changes in regulations impact the supply chains of batteries and the mining of rare metals required for their manufacturing. The increased awareness and scrutiny around ESG criteria and human rights violations associated with battery mining have furthermore made traceability technology - including blockchain technology - highly relevant to the mining sector.

This free event will focus on the state of the market, supply chain and sustainable mining practises for battery metals.

Offering perspectives from Asia, Africa, Europe, South America, and North America, this free event features panels and roundtable discussions around the most pressing challenges raised in the mining and battery sectors today.

Panel topics

Supply and demand of
critical metals

Traceability and
blockchain technology
for supply chain tracking

Opportunities and
challenges in battery
manufacturing

Standards & regulations
for batteries

Sustainable mining: best
practises in ESG &
human rights

Panels and discussion questions will include:

- What impact will new European policies have on the battery mining sector?
- What implications will new mining standards have on battery supply chains globally?
- What are some best practices observed for the sustainable mining for battery minerals?
- What technology serves the traceability for raw minerals ?
- How can blockchain technology be used at the service of the mining sector, and how can we grow a community of users?
- What role do the OEMs play in the future of battery mining?

Sponsorship opportunity

Thank you for your interest in BatteryMining Dialogue. We look forward to impactful conversations among thought leaders of the battery and mining sectors and value your trust and contribution as a potential sponsor for this event.

With the increased awareness and scrutiny around ESG criteria and human rights issues associated with battery mining, we believe it is important to create discussions for members of the battery sector, the regulatory realm, and the mining industry to discuss up to date trends and the future of battery mining.

We aim to offer perspectives from Asia, Africa, Europe, South America, and North America, and will ensure a high level of visibility to all our sponsors, from the planning to the execution phase of this event.

Expected Impact

This event features both free and paying tickets and we expect attendance from several hundreds of professionals from both the battery and mining sectors alike. All sponsors receive a number of VIP tickets among a few other key advantages and great visibility (prior to and during the event).

Leaders working across the entire battery and mining value chains are expected to attend, from battery mining industry leaders to traceability, blockchain, recycling experts, as well as OEMs, policy experts, and battery manufacturers.
